My Service

- Translate UI/UX designs into prototypes for seamless interaction.
- Develop frontend with a user experience focus and write reusable code for future maintenance.
- Design and maintain features, collaborating with backend developers when needed.
- Optimize applications for speed and scalability, leveraging React, Redux, Material UI, Tailwind CSS, Node.js, and MongoDB.
- Specialize in building e-commerce applications using the JavaScript MERN stack.
- Possess a deep understanding of the DOM and collaborate effectively on client-facing and internal projects.
- Familiar with SDLC, UML, PLM, Agile, and related methodologies.
- Strong analytical skills, eagerness to learn new technologies, and adept problem-solving abilities.
- Constantly exploring and experimenting with emerging web technologies while adhering to Agile methodologies.

Project Summary

1. Personal Portfolio

- This website is a personal portfolio for me. This website has all of what I learned and a lot of mini projects.

Language and Environments

- React, TyeScript, Tailwind CSS
- GitHub
- Vercel
- https://thandarlin.vercel.app

2. React Movie Website

- This website is a movie website. All front-end data is retrieved from the database using an API, where we implemented front-end designs.

Front-End Functions

- Customers can view all movies.
- Customers can view movie details, trailers, ratings, and cast.
- Customers can search for movies.
- Customers can view updates about movies.
- Customers can filter movies by selecting specific criteria such as genre, release date, and rating.
- Customers can sort movies by popularity, release date, and rating.

Language and Environments

- React, Redux, SCSS
- GitHub
- Vercel
- https://redux-movie-website.vercel.app

---

3. Real Estate Website

- This website is a real estate website. All front-end data is retrieved from the database using an API, where we implemented both front-end and back-end designs.

Front-End Functions

- Customers can only log in and register with their actual email.
- Customers can view all properties and utilize the wishlist and booking modules. They can also access detailed information and view specific property locations on a map.
- Payment integration with Stripe.
- Blogs module.
- Admin can add and delete properties.

Language and Environments

- React, CSS, Node.js, Express.js, MongoDB, Prisma, Cloudinary
- GitHub
- Vercel
- https://react-real-estate-website-delta.vercel.app/

---

4. CoralCart Ecommerce

- This website is an eCommerce website related to commodity products. We created the design and front-end development using Redux Toolkit and Tailwind CSS.

Front-End Functions

- Customers can view products and product details.
- Customers can login and register.
- Customers can add items to the cart and review their ordered lists.
- On the cart page, customers can increase, decrease, and remove items, as well as view their total order amount.
- Customers can add items to their wishlist and review them on the wishlist page.
- Customers can easily browse items by category and view best-selling items each month.
- Customers can read blogs related to beauty.
- Customers can easily search for items on the search page.
- Customers can easily contact the company through the contact us page.

Language and Environments

- React, Redux Toolkit, Typescript, TailwindCss,
- GitHub
- Vercel
- https://coralcartecommerence.vercel.app/
